

detecting a central area and first areas of the spatial frequency space, the first areas being a first distance from the central area;

detecting the central area and second areas of the spatial frequency space, the second areas being a second distance from the central area; and

detecting the central area and third areas of the spatial frequency space, the third areas being a third distance from the central area.

10. The process according to claim 9, wherein the first, second, and third areas of the spatial frequency space are spaced at different distances from the central area.

11. The process according to claim 9, wherein the areas of the spatial frequency space that overlap cover the central area.

12. The process according to claim 9, wherein the first, second, and third areas of the spatial frequency space have higher spatial frequencies than the central area.

13. The process according to claim 9, wherein the first, second, and third areas of the spatial frequency space extend substantially parallel to each other.

14. The process according to claim 9, wherein elements of one of the first, second, or third areas of the spatial frequency space form a disjunctive set.
